## LETTER FROM THE CHAIRMAN & THE PRESIDENT

*After nearly seven years of not being able to talk directly to homeowners in propane country, the Council made the consumer campaign a top priority and created a task force of industry volunteers to set the strategy.*

We knew from the outset that the campaign would have to build over time, so we put in place a three-year strategy to reach current and prospective propane users nationwide.

It was also clear that we needed to bring on a research firm to measure the campaign, and we needed a communications agency capable of carrying out a national multimedia campaign.

We hired Nielsen, a renowned research firm, to conduct a nationwide survey of homeowners in propane country and set a baseline for the campaign. What we learned was that less than half of nonusers of propane considered themselves familiar with our fuel and barely a quarter had a favorable view of it.

The agency would have its work cut out for it to improve the public's perceptions of propane.

We chose The Richards Group, the nation's largest independent advertising and branding agency, to come up with ad concepts and design the media plan.

We tested the ad concepts with consumer focus groups who overwhelmingly favored the Blue the Dog concept. Not surprising that folks who live in propane country would love animals.

They felt that they could have an emotional connection with Blue and wanted to learn more about him.

In April, we introduced the campaign to the industry at the NPGA Southeastern Expo and launched it nationwide on TV, on radio, online, in print, and in cinemas at the end of June.

Since then the industry has embraced the campaign, using campaign materials and resources on their websites and social

media pages and buying their own local radio and TV ads, which they tagged with their company information.

Having our industry work together to expand the reach of the campaign and to increase the number of times our messages are heard by consumers has been critical to the campaign's success.

With the TV and other media run completed for the year in October, we wanted to know whether the campaign had an impact on consumers' attitudes toward propane. Nielsen went back into the field to interview consumers.

Among those who recalled seeing the ads on TV, familiarity rose 16 points among non-users, and favorability increased 9 points for non-users. Even among current propane users favorability shot up 17 points.

Key propane attributes communicated in the ads, like "clean," "made in America," and "available everywhere" were up roughly 10 points among propane users and non-users, with propane users being more likely to trust and advocate for propane and purchase a propane appliance. That word-of-mouth advocacy is incredibly valuable.

The numbers tell us the campaign is working. Our challenge for next year is to reach more people with our ads and increase how many times they see them. We're off the air as 2016 comes to an end, and the longer we're dark the likelier it becomes that some of these improvements will begin to fade.

That's why our plan next year involves going back on the air in March, April, and May. Stay tuned for more details.

### THANK YOU FOR YOUR SUPPORT.

## RESEARCH & DEVELOPMENT

*In early 2016, Roy Willis announced the milestone achievement that 40 new OEM products had been developed since PERC's creation 20 years ago. That and a good foundation of safety and training programs put the industry in a great position to promote propane in the consumer campaign.*

Throughout the year, PERC strengthened existing relationships with equipment manufacturers while forging relationships with new partners in expanded market opportunities. These efforts drove the proliferation of propane products and the development of new opportunities [construction, concrete finishing, forestry], which could represent significant gallon growth for marketers.

In the agriculture market, PERC showcased a propane-powered tractor prototype at the Farm Progress Show. Market research indicated strong interest in the tractor from fleet customers. PERC helped launch three other new agricultural products this year: the GSI heat reclaim tower dryer, the Mathews-Company Legacy series grain dryers, and the Sukup octagon burger for Sukup grain dryers.

In the industrial market, PERC engaged a heavy diesel manufacturer, Cummins, to build a high-efficiency propane medium- to heavy-duty engine suitable for class five-seven trucks, including bobtails.

In the off-road market, the PSI 4x forklift engine was quickly adopted by Mitsubishi and Caterpillar in early 2016 — with additional announcements and adoptions to come in 2017. The 4x was developed to be more fuel efficient, reduce tailpipe emissions, increase reliability, and reduce overall engine packaging size. As for the mowers market — according to a 2016 survey conducted by PERC, within three years, more than half of outdoor power equipment dealers will be offering propane commercial mowers to their customers.

In the on-road market, the Department of Energy (DOE) announced funding for

direct-injection propane engines, starting in June 2016. The announcement comes after three years of collaboration with the DOE, the National Renewable Energy Laboratory, OEM partners, and end-users.

In mid-2016, PERC approved 14 funding requests, including \$1 million for the development of a high-efficiency, ultra-low-NO<sub>x</sub> engine for medium-duty trucks. The Council also approved \$515,000 for the development of high-horsepower, emissions-certified engines for off-road purposes, such as irrigation and power generation.

In late 2016, PERC shared the highlights of a national survey conducted by Nielsen, confirming the consumer campaign made a significant impact on the target audience. Homeowners' awareness and perceptions of propane improved among those who saw the ads — making the audience more receptive to marketers' messages.

# SAFETY

## CONSUMER SAFETY IN 2016

**4,170** CONSUMER SAFETY ORDERS/DOWNLOADS **OF** **110** DIFFERENT PRODUCTS

*In 2016, PERC celebrated the 10th anniversary of CETP E-Learning Courses. Today, PERC now offers seven e-learning programs that thousands of marketers use to teach their employees about topics covering bobtail delivery, first 90-day hazmat training, and vapor distribution.*

The Council updated the Dispensing Propane Safety Program — one of its most popular safety materials about the proper ways to fill several different kinds of propane tanks and cylinders. PERC also added new information about dispensing operations for propane mowers and autogas vehicles.

PERC also updated the Gas Check Program based on feedback from propane industry members. The program now includes a booklet and companion video that provide simplified guidelines and illustrations to show how to properly fill out Gas System Check and Gas Appliance System Check forms. More details about the program updates are available at [propanecouncil.org](http://propanecouncil.org).

Propane Autogas Technician Training was another great success in 2016. PERC trained 150 technicians, and 14 NAFTC member schools have adopted the course or plan to do so in 2017.

PERC piloted a new approach to safety training that blends online training with classroom instruction. This allows busy marketers to review training at their own pace before attending a one-day review class. This cuts down on time out of the office for marketers. The small investment in this pilot approach resulted in a 100 percent pass rate for the NPGA CETP Certification exam, demonstrating how valuable this training will be in 2017.

# TRAINING

*The Marketer Technology and Sales Training (MTST) program held 70 classes this year, which included over 1,000 students. The “Expand Sales Through Customer Service” module, which was first offered in 2015, was by far the most popular module — accounting for 47 of 70 classes. PERC also developed digital training to complement the classroom training, which is currently available on [propanecouncil.org](http://propanecouncil.org).*

In 2016, PERC introduced a new course about backup power: “Market Drivers, Code Requirements, and Fuel Options for Backup Power.” Power outages in commercial buildings create enormous costs and hardships for business owners, tenants, and employees. For these reasons, many commercial buildings are incorporating backup power systems — some on a voluntary basis and others based on code requirements. In this course, backup power systems, specifically generators, are explored to understand their background, applications, and the benefits of different fuel sources. The course can be found on [buildwithpropane.com](http://buildwithpropane.com).

Propane is moving fast in the on-road market, powering light, medium, and heavy-duty vehicles including pick-up trucks, delivery vans, and school buses. In 2016, PERC partnered with the National Alternative Fuels Training Consortium to develop training courses for technicians across the country. The course teaches technicians how to adapt, service, and maintain propane autogas vehicles.

PERC developed a new course — “Overview of Propane Distribution Systems for HVAC and Plumbing Professionals” — to assist marketers in building relationships with local plumbing and HVAC professionals

to ultimately grow their residential business. The free course is available at [propaneprofessional.com](http://propaneprofessional.com).

The Propane Training Academy gained a new course for construction professionals and propane marketers to understand codes and standards, fuel options, and motivations for commercial businesses to install backup power generators. This course and others on Propane Training Academy can help builders, architects, engineers, and remodelers complete requirements for continuing education in their profession.

PERC was proud to have many of these new courses on display at the 2016 NPGA Southeastern Convention in April.

## WORKING WITH STATES

*At a meeting in Napa, California, PERC raised the assessment rate to 0.45 cents per gallon, effective November 1, 2016. The additional revenue, projected to be about \$3 million for programs in 2017, will fund the consumer education campaign, commercialization projects, and the Partnership with States program.*

In 2016, PERC undertook consumer research to learn more about propane customers in preparation for the consumer education campaign. Research clearly showed that customers are independent, self-reliant, and proud of where they live and the energy they use. But many were unaware of the comfort and efficiency propane could supply to their home. Blue the Dog, the central character of the campaign, was developed to be a friendly face to communicate that message. PERC and agency partner research showed customers could form an emotional connection to Blue and his propane marketer-owner.

For six months, PERC worked with industry leaders to integrate [propanecouncil.org](http://propanecouncil.org) and [propanemarc.com](http://propanemarc.com), making the online experience for marketers easier and more efficient. The new online catalog hosted marketer materials for the consumer outreach campaign featuring Blue the Dog. Marketers can download radio spots, magazine advertisements, bill stuffers, and more at [propanecouncil.org](http://propanecouncil.org).

In August, PERC launched a Facebook consumer sweepstakes to build awareness and promote propane. In seven days alone, the Council received over 10,000 entries to win a propane generator or a limited edition campaign t-shirt from the Proudly Propane Facebook page.

Residential Opportunity Insights (ROI) from PERC are market-specific reports full of homeowner data, propane sales trends, and local builder information. Where available, they can even give marketers insights into local media consumption. The ROI project was developed by PERC to provide marketers with the info they need in their marketing and sales efforts.

This year, PERC launched a series of quick-fact infographics for marketers to share on Twitter and Facebook each month. Each infographic has a quick fact about propane for a specific market, including residential, agriculture, autogas, and landscape. The infographics are available at [propanecouncil.org](http://propanecouncil.org).

In 2016, PERC continued to offer the Propane Mower Incentive Program to landscape contractors. Through this program, contractors could apply to receive \$1,000 for qualified mower purchase, or up to \$500 per qualified mower conversion. This program was developed by PERC to grow your gallons by spreading awareness of the benefits of propane mowers.

In September, PERC's Back-to-School Campaign officially kicked off when campaign spokeswoman, Jenna Bush Hager, conducted a satellite media tour in New York City. Hager, a mother of two and former

teacher, spoke about the importance of school bus safety and extolled the benefits of propane buses in more than 24 TV markets across the country. Also in 2016, PERC launched [quieterschoolbuses.com](http://quieterschoolbuses.com), where parents and educators can take a school bus noise quiz — complete with sound clips comparing diesel and propane autogas school buses in operation.

With more than a third of contractors reporting that they're considering propane mowers, and 75 percent saying their dealer influences buying decisions, PERC was inspired to help facilitate the connection between contractors and dealers. That's why the Council launched Propane Equipment Dealer Point, the only search engine of its kind, which allows contractors to find the nearest dealers who sell, service, and warranty propane mowers. Propane Equipment Dealer Point can be found on [propane.com](http://propane.com).

PERC created the new Industry Outreach Committee to increase state association involvement with PERC. Made up of state association executives and other PERC representatives, the committee will coordinate with states on rebate programs, consumer education, training, and market and industry outreach communication.

## LOOKING AHEAD

*Next year promises to bring change to PERC. In keeping with the Council's rules, two-term chairman Tom Van Buren, executive vice president of Ferrell North America & Midstream, will hand the gavel to a new chairman in July. And PERC's first employee, President and CEO Roy Willis, will retire at the end of that month after nearly 20 years of service to the Council. The Executive Committee has begun taking steps to find a qualified successor and ensure a smooth transition of leadership.*

The Council will also develop a new strategic plan for PERC in 2017, under the leadership of Council Vice Chairman Drew Combs, vice president of CHS. The strategic plan will identify the Council's priorities, goals, and initiatives through 2019 as it implements the Propane Education and Research Act of 1996 and the Propane Education and Research Enhancement Act of 2014.

In 2017 the PROUDLY PROPANE Clean American Energy® campaign will enter its second year. The budget reduces the investment in consumer education for 2017, owing partly to lower than expected assessment revenues in November and December 2016. The schedule calls for a media investment of about \$6.5 million, beginning with a three-month media buy in the spring.

When advertising resumes in March, the campaign will have been off the air for about five months. The Council expects last year's consumer familiarity and favorability gains

to have eroded somewhat during that time. The spring media buy is designed to coincide with tank-setting season and to reach homeowners as they make plans to build and remodel homes during the warmer months.

The advertisements, featuring a dog named Blue and his faithful companion, a bobtail driver, are designed to increase awareness of propane, make homeowners feel better about propane, and make them more receptive to marketer messages. Marketers can take advantage of rising favorability by promoting their companies, their products, and their services to current and prospective customers. New campaign materials, including bobtail decals and a four-foot-high cardboard cutout of Blue, can help marketers keep the conversation going.

Elsewhere, PERC and the propane industry will seek to capitalize on an opportunity presented by an environmental mitigation trust fund that makes up part of a larger Volkswagen

emissions settlement. The trust fund, totaling \$2.7 billion, will enable states to replace diesel engines with cleaner technology that reduces excess emissions of oxides of nitrogen, or NO<sub>x</sub>. For NO<sub>x</sub> reduction per dollar invested, propane autogas is the best option. That creates an opening for propane autogas school buses and many other products that can help states cut emissions, cut operating costs, and increase safety.

In safety and training, PERC will create and distribute new consumer safety videos that marketers can share with their customers. The videos will teach homeowners how to read a tank gauge, how to shut off gas at the tank, what to do if they smell gas or suspect a leak, how to handle small cylinders safely, and why and when to have their propane systems inspected. The emphasis will be on propane system features that are designed to give homeowners peace of mind.

As part of its ongoing effort to encourage widespread adoption of newly developed products that run on propane, the Council will continue reaching out to agricultural, autogas, outdoor power equipment, material handling, and residential and commercial construction markets. PERC will also continue working hand in hand with marketers and their membership associations to give them information, tools, strategies, and techniques that can help them drive demand for propane.
